

EMPLOYEE EXPOSURE PROTOCOL INSTRUCTIONS

STEP 1: Report the Work Related Injury

STEP 2: If you were exposed to a blood borne pathogen, the source patient's MD must order the **EPIC Employee Exposure Source Patient Protocol (PX Code O304052023)** for source patient blood to be collected.

- A. Labs include: HIV, Hep C Antibody, & Hep B Surface Antigen w/reflex
- B. Collect blood from source patient (**Not Employee**) using **TWO red or TWO gold** top vacutainer tubes
- C. Include Employee Badge ID # in the order
- D. Apply barcoded labels to each tube
- E. Send immediately to the lab

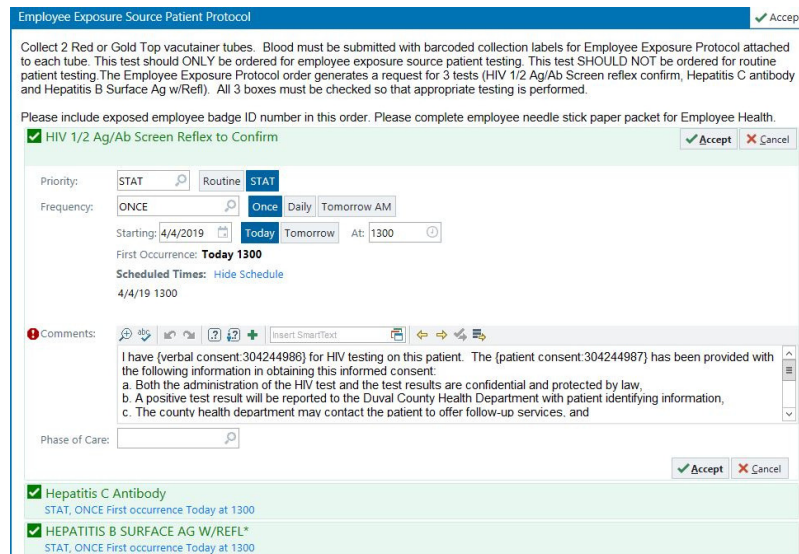

The Employee Exposure Protocol generates a request for 3 test items.

ALL 3 MUST BE CHECKED so that appropriate testing is performed!

HIV 1/2 Ag/Ab screen reflex confirm

Hepatitis C antibody

Hepatitis B surface Ag w/Refl

Employee Exposure Source Patient Protocol

Collect 2 Red or Gold Top vacutainer tubes. Blood must be submitted with barcoded collection labels for Employee Exposure Protocol attached to each tube. This test should ONLY be ordered for employee exposure source patient testing. This test SHOULD NOT be ordered for routine patient testing. The Employee Exposure Protocol order generates a request for 3 tests (HIV 1/2 Ag/Ab Screen reflex confirm, Hepatitis C antibody and Hepatitis B Surface Ag w/Refl). All 3 boxes must be checked so that appropriate testing is performed.

Please include exposed employee badge ID number in this order. Please complete employee needle stick paper packet for Employee Health.
